

ALI ARSALAN

Unity Game Developer

ABOUT ME

Unity game developer and software engineer experienced in designing and developing complete gameplay systems, mechanics, user interfaces, multiplayer features, and interactive environments using Unity and C#. Built projects ranging from psychological horror to multiplayer physics-based games, with hands-on experience in game architecture, debugging, deployment, audio, visual design, and rapid prototyping. Comfortable independently taking a game from concept and system design through implementation, testing, and release preparation.

EDUCATION

Capital University of Science & Technology

Bachelor of Software Engineering

2022 - 2026

SKILLS

- Game Development: Unity, C#, Python/Pygame, Game Mechanics
- Game Systems: Player Controllers, Inventory, Interaction, Save Systems, UI/UX
- Physics & Networking: Unity Physics, Client-Server Architecture, Multiplayer Synchronization
- Visual & Audio: Animations, VFX, Sound Integration, Photoshop, Blender
- Technical: Git, REST APIs, AWS, Debugging, Performance Optimization
- Platforms: Windows, Android Development

EXPERIENCE

Whispers of the Book

LEAD GAME DEVELOPER - UNITY / C#

2025 - PRESENT

- Developing a first-person psychological horror game from concept to Steam release preparation.
- Built player movement, interaction, inventory, sanity, flashlight, puzzle, stealth, and hallucination systems.
- Created modular gameplay architecture and UI for inventory, prompts, pause menus, and settings.
- Integrated lighting, audio, animations, VFX, and environmental storytelling.

Gravity Duels

MULTIPLAYER GAME DEVELOPER - PYTHON/PYGAME

- Developed a physics-based multiplayer game using a custom client-server architecture.
- Implemented real-time communication, synchronization, server-side logic, and concurrent player interactions.
- Deployed the backend on AWS and resolved latency, physics, and state-consistency issues.

Game Development Side Projects

SNAKE & FLAPPY BIRD – C++/PYGAME

- Recreated two arcade games with player controls, collision detection, scoring, obstacle spawning, difficulty progression, and complete game-state loops.
- Implemented responsive input, game-over and restart systems, strengthening rapid prototyping, debugging, and gameplay programming skills.

APRO

IT HEAD - PRODUCT & PLATFORM DEVELOPMENT

JAN 2026 - PRESENT

- Lead the development, deployment, and maintenance of organizational software, digital products, websites, databases, and internal systems.
- Work independently across requirements, architecture, implementation, testing, debugging, deployment, and ongoing support.
- Coordinate with users and leadership to translate practical requirements into functional digital solutions
